9597673566 | sabharishc98@gmail.com | linkedin.com/in/sabharish-c | github.com/SabharishC98 | leetcode.com/u/Sabharish_C

Full-stack developer (React, Node.js, MongoDB) with LLM security research experience and 600+ LeetCode problems solved.

Work Experience

Centillion Labs

Sep 2025 – Oct 2025

AI Intern

Bengaluru, Karnataka

- Conducted independent research on LLM jailbreaking techniques, adversarial prompt injection, and prompt manipulation strategies targeting production-grade large language models.
- Evaluated and documented AI safety mitigation strategies — analyzed model behavior under manipulated prompts to identify failure modes and improve response robustness.
- Designed prompt engineering methodologies to strengthen LLM guardrails and reduce unsafe, hallucinated, or policy-violating outputs.
- Built AI-powered web features using Python and LLM APIs to analyze user inputs and support real-time decision-making within web applications.

Gateway Software Solutions

Jun 2025

AI Intern

Coimbatore, Tamil Nadu

- Constructed a real-time crop suitability model utilizing DeepSeek and Mistral API, processing soil conditions, weather patterns, and crop yield data to assist agricultural decision-making.

Projects

InterviewAI | React.js, Node.js, Express.js, MongoDB, Google Gemini, AssemblyAI, Murf AI

- Engineered a full-stack AI-powered mock interview platform that generates personalized interview questions by parsing uploaded resumes using Google Gemini.
- Integrated voice-based interviews using AssemblyAI speech-to-text and Murf AI text-to-speech — enabling fully interactive, hands-free interview sessions.
- Built AI-powered scoring and feedback engine that evaluates answers for relevance, depth, and communication quality with structured improvement suggestions.
- Designed end-to-end pipeline: resume upload → question generation → voice interview → AI scoring → feedback report.
- github.com/SabharishC98/Mock_Interview_AI

ShadowLens — Multi-Agent Prompt Injection Research Framework | Python, LangGraph, FastAPI, React, MongoDB, DistilBERT

- Built a security testing harness for LangGraph multi-agent pipelines that detects prompt injection propagation across agent trust boundaries.
- Fine-tuned DistilBERT classifier on 15k+ labeled prompts achieving 87% accuracy in identifying 5 distinct injection techniques.
- Designed passive Observer architecture with zero pipeline execution overhead, enabling non-intrusive real-time monitoring of agent-to-agent communication.

Offline Voice-Controlled Chess | Python, Pygame, Vosk, python-chess

- Built a fully offline voice-driven chess application — zero internet dependency, all speech processing runs on-device using Vosk's lightweight local speech model.
- Tuned and tested specifically for Indian English accents — addressed phonetic variance in chess notation commands (e.g. "E2 to E4") that cloud-based engines routinely misrecognize.
- Achieved high command recognition accuracy across varied speaking speeds and accent patterns without any cloud API calls or latency.
- github.com/SabharishC98/Voice_Chess_Offline

LeetCode IntelliSense | Chrome Extension, Manifest V3, JavaScript, Monaco Editor API

- Built an open source Chrome extension providing real method completions, algorithm snippet templates, and keyword suggestions inside LeetCode's code editor.
- Solved a non-trivial technical problem: LeetCode's Monaco editor is fully sandboxed — no global `window.monaco`, strict CSP, private webpack bundle. Hooked into Monaco's native `CompletionItemProvider` API as the only reliable injection point.
- Supports JS, Python, Java, and C++ with 100+ completions, algorithm templates (BFS, DFS, Binary Search, Backtracking, DP), and in-file word suggestions.
- github.com/SabharishC98/leetcode-autocomplete-extension

Research Experience

LLM Jailbreaking & Prompt Injection Research

2025

Centillion Labs — Bengaluru, Karnataka

- Investigated jailbreak attack patterns, adversarial prompts, and prompt injection techniques targeting large language models in production environments.
- Analyzed model behavior under manipulated inputs to identify safety gaps; evaluated mitigation strategies for improving LLM robustness and output reliability.

Hospital-Scale Autonomous Logistics & Thermal-Controlled Delivery Systems

2024 – Present

Field Research @ KMCH, Coimbatore (Ottonomy) — Coimbatore, Tamil Nadu

- Mapped hospital logistics end-to-end including food, medical supplies, files, and emergency routes; identified food delivery as primary autonomous robot use case.
- Proposed temperature-controlled payload integration and optimized indoor navigation routes for autonomous deployment.

Education

Dr. NGP Institute of Technology

2023 – Present

Bachelor of Engineering in Computer Science Engineering | CGPA: 8.28

Coimbatore, Tamil Nadu

Skills

Languages: Python, Java, JavaScript

Frontend: React.js, Vite, HTML, CSS

Backend: Node.js, Express.js

Databases: MySQL, MongoDB

AI / LLM: LangChain, LangGraph, AssemblyAI, Murf AI, Prompt Engineering, LLM Security

Tools: Git, GitHub, Monaco Editor, Chrome Extensions (Manifest V3), Vosk (Offline ASR)

DSA: 600+ LeetCode problems solved | leetcode.com/u/Sabharish_C

Achievements

- 1st Place — Coder's Arena, Bannari Amman Institute of Technology (Nov 2024)
- 1st Place — Glitch Hunt (Debugging Contest), Bannari Amman Institute of Technology (Nov 2024)
- 1st Place — Hack Quest, Suguna College of Engineering (Oct 2024)
- 1st Place — Pixel Pursuit, PSG iTech
- Runner-Up — Find Boo Boo, SKCET (Mar 2024)

Certifications

Cloud Computing — NPTEL (IIT Kharagpur)

Introduction to Internet of Things — NPTEL (IIT Kharagpur)
